OPINION TO THE USER

Name: Maribel Naranjo (taxi driver)

Good morning, my name is Maribel Naranjo, I am a taxi driver from the San Francisco cooperative, regarding the application, I find it very interesting since this would be of great help to us, providing us with security and a greater guarantee of our service, right now from what I understand this application is a kind of prototype to verify and thus try to reach a real project, right now what you teach me seems to me something pleasant to use, I would like different functions such as gps to be functional at the beginning, that at the moment If you enter the following pop-up window, it should have the menu in the internal part of the window and not as a tab, since for some it would be annoying and not very aesthetic.

In the location part I would like the location to be real since what they are giving us is only an image of a map but not the real location, in locating my vehicle I would like the coordinates to come out or something indicative of the location we are in or something that it gives us a signal that this system works, and in terms of vehicle control it seems to me to be a very good thing, since in this way we can control our safety through this same system.

It seems to me an impressive and great idea that they are trying to give to solve the problems that this country has in terms of taxi driver safety, I hope that they can complete this project and finish it successfully.
